Background

The objective of SPU's Localized Flooding Program is to investigate, prioritize and streamline implementation of small to medium-sized Seattle SPU drainage projects that address the highest impacts to public safety, health, and property, and to meet SPU's flooding and landslide service level targets. In 2014 SPU plans to complete Options Analysis for 5 of the highest localized flooding problem locations in the City.

Project Scope

This will be a phased engineering services contract as needed to supplement SPU staff. SPU plans to complete Options Analysis in each of these 5 areas localized flooding problem areas in 2014, and Design and Construction in future years. The 5 localized flooding problem areas that may be included in this RFQPA are as follows.

- 3rd Avenue S between S Brandon and S Lucile Streets
 - Scope – Improvements to drainage system to reduce localized flooding
- NE 94th Street and 27th Avenue NE
 - Scope – Improvements to drainage system to reduce localized flooding
- Stone Pond (still collecting background information)
 - Scope – Hydraulic controls upgrade for existing drainage detention pond to prevent localized flooding downstream
- SW Alaska Street & Cottage Place SW (still collecting background information)
 - Scope – Improvements to drainage system to reduce localized flooding
- NW 120th Street and 9th Avenue NW
 - Scope – Outfall replacement and improvements to drainage system to reduce localized flooding

Contracting Opportunities

Schedule of Events	Target Date
RFQPA Release	Anticipated 2 nd Quarter 2014
Pre-Proposal Conference and Site Visit	To be determined
